CrossBox on a server that has Postfix and Dovecot?

Question

- 1. Can I install CrossBox on a server that already has PostFix and Dovecot?
- 2. Can we use CrossBox as a simple Webmail UI?
- 3. Can we have CrossBox automatically create user accounts upon successful IMAP login?

Answer

1. Yes.

If you install CrossBox on the server which has IMAP/SMTP services already running, those will be used automatically by CrossBox and it won't change any of your existing configuration files.

- 2. Yes.
- 3. Yes, new users are automatically created (including the database) if the IMAP login works.
